

IN THE CLAIMS:

Please amend the claims as follows:

1. (Cancelled)

2. (Currently amended) ~~The rotational velocity controlling system of claim 1 A~~
rotational velocity controlling system in an information recording/reproducing apparatus which
records and reproduces information on/from an information recording medium, the system
comprising:

revolution number detecting means for detecting the number of revolutions of the
information recording medium;

linear velocity detecting means for detecting the linear velocity at an information
recording/reproduction position on the information recording medium;

control information generating means for generating rotation control information used for
controlling the rotational velocity of the information recording medium based on the revolution
number information obtained by the revolution number detecting means and the linear velocity
information obtained by the linear velocity detecting means; and

driving means for rotating the information recording medium based on the rotation
control information generated by the control information generating means,

wherein:

the control information generating means uses the revolution number information obtained by the revolution number detecting means and the linear velocity information obtained by the linear velocity detecting means to divide one of these information by the other;

the control information generating means generates a revolution number error from the revolution number information based on an operation result value obtained by the division; and

the control information generating means outputs the revolution number error as the rotation control information to the driving means.

3. (Original) The rotational velocity controlling system of claim 2, wherein the control information generating means includes numerical range limiting means for limiting the numerical range of the operation result value.

4. (Original) The rotational velocity controlling system of claim 3, wherein the numerical range limiting means is upper limit means for limiting an operation result value which exceeds a predetermined value to the predetermined value.

5. (Currently amended) ~~The rotational velocity controlling system of claim 1, further comprising~~ A rotational velocity controlling system in an information recording/reproducing apparatus which records and reproduces information on/from an information recording medium, the system comprising:

revolution number detecting means for detecting the number of revolutions of the information recording medium;

linear velocity detecting means for detecting the linear velocity at an information recording/reproduction position on the information recording medium;

control information generating means for generating rotation control information used for controlling the rotational velocity of the information recording medium based on the revolution number information obtained by the revolution number detecting means and the linear velocity information obtained by the linear velocity detecting means;

driving means for rotating the information recording medium based on the rotation control information generated by the control information generating means, and

abnormality detecting means for detecting occurrence of an abnormality in the output of the linear velocity detecting means according to ~~the~~ a relationship between the revolution number information and the linear velocity information.
